

BUILDING INTEGRATED PHOTOVOLTAIC (BIPV): TRAINING WORKSHOP AND GUIDED TOUR

Introduction PVSITES project

Eduardo ROMAN, TECNALIA

Donosti, M2, TECNALIA, 6 Nov 2019

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 691768

PVSITES: Quick facts

Funding EU: 5.47 M€ (+ 1.4 M€ Switzerland)

01/01/2016 – 30/06/2020

PVSITES: Objective and challenges

General objective: To drive BIPV technology to large market deployment led by EU industry

To be achieved by:

- Identifying and addressing BIPV market / business requirements
- Demonstrating in real buildings (TRL5 to TRL6-7) an **ambitious portfolio of BIPV solutions** in terms design and simulation, architectural integration, performance, cost-effectiveness, grid integration, energy management, LCA, training and awareness

Market challenges

Enhanced flexibility of design, outstanding aesthetical value, multi-functionality and cost-effectiveness

Assistance to design phase through the joint simulation of BIPV products and building energy performance

More predictable, manageable, grid-friendly profitable BIPV generation

Demonstration of performance and reliability of BIPV solutions through effective incorporation onto real buildings

PVSITES: challenges

Challenge: Enhanced flexibility of design, outstanding aesthetical value, multifunctionality and increased performance

Solution: A wide portfolio of BIPV products based on c-Si and CIGS technologies complying with market requests

Glass–glass crystalline silicon based solutions (ONYXSolar), developed in PVSITES

CIGS on metal BIPV modules (FLISOM), developed in PVSITES

PVSITES: challenges

Challenge: Software tool for the joint simulation of BIPV products and building energy performance

Solution: An accurate, user-friendly, integrated SW tool for the simulation of BIPV products performance and their impact on building energy demands

PVSITES: challenges

Challenge: More predictable, manageable, grid-friendly and profitable BIPV generation

Solution: A combination of flexible and high efficiency grid interface for BIPV systems and new building energy management strategies.

DC/AC converter,
TECNALIA

CEA's inverter printed circuit-board with
surface-mounted electronic components

Planner tool, TECNALIA

PVSITES: challenges

Challenge: To demonstrate reliability of advanced BIPV solutions through effective incorporation onto real buildings

Solution: High impact, replicable demonstrations and training activities in real buildings and experimental facilities throughout Europe

Carport, Zürich (SW)

Roof, Stambruges (BE),
residential

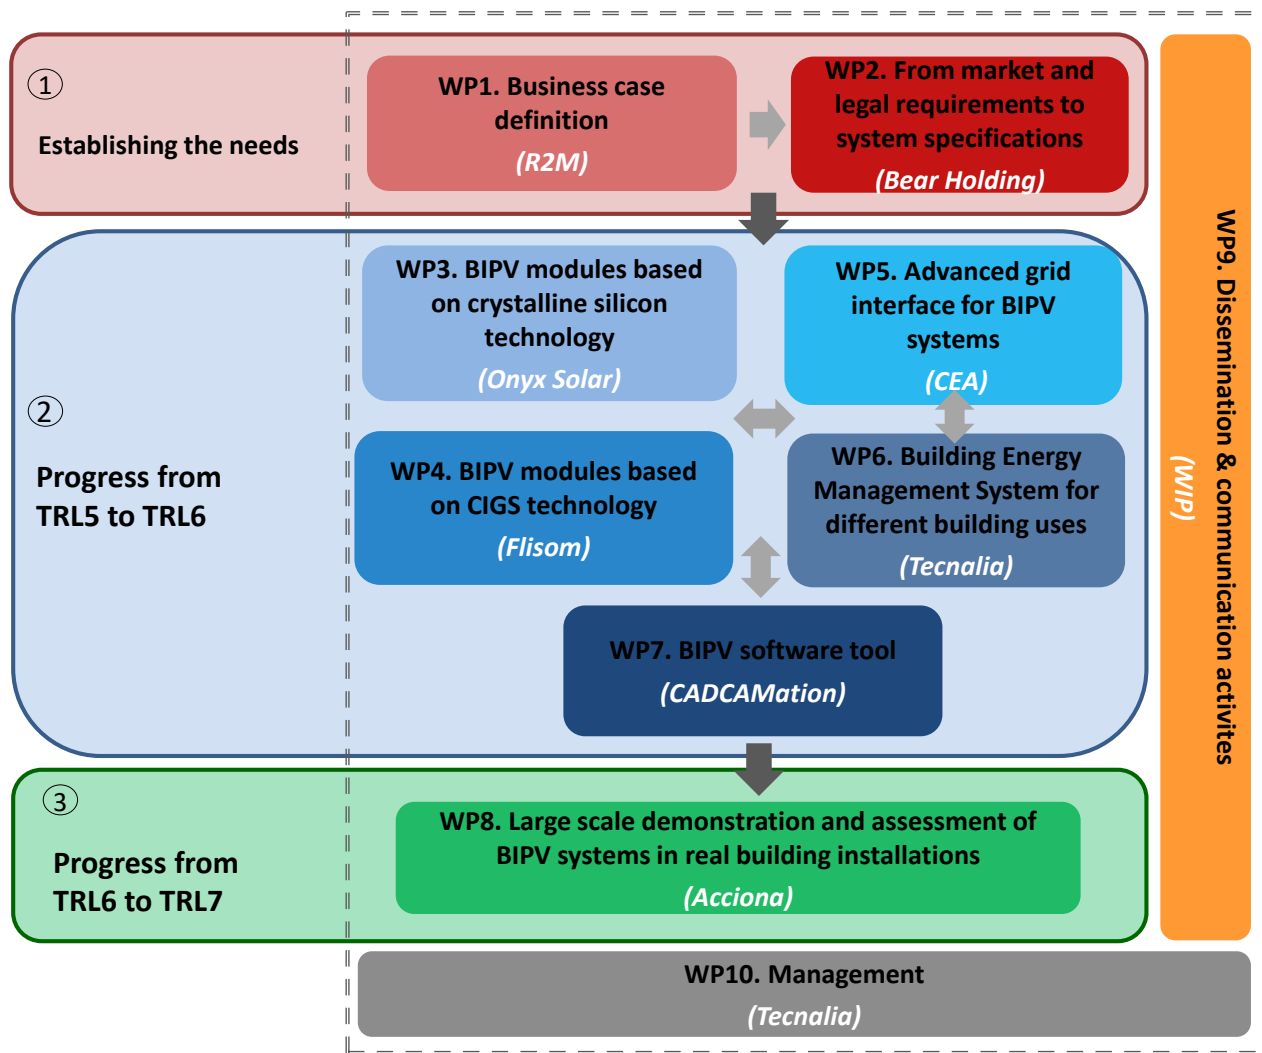

Opaque facade, Wattignies (FR),
social housing

PVSITES: Implementation

WorkPlan

PVSITES: Achievements (PV techs)

Market related activities:

- Market and stakeholder analysis conducted.
- Assessment of regulatory framework
- Application of the new BIPV standard, EN 50583 (2016)
- Analysis of exploitable results (26 ERs, with commerc., IPR paths).
- Standardization needs for project results.
- Business models for BIPV.
- Global risk assessment.
- ...

PVSITES in the market

PVSITES in the market – CIGS products

250 kW installation of e Flex CIGS product (FLISOM) in a flowers market in Johannesburg (SA)

PVSITES in the market

PVSITES in the market – c-Si products

Black frit PVSITES modules in Atic in Castle Lane Street, close to Buckingham Palace, London (Onyx Solar)
